SKILLS

LANGUAGES

PHP · Node.js · Python 3 · JavaScript

FRAMEWORKS

Laravel · NestJS · Vue.js · Node.js

DATABASES

MySQL · PostgreSQL · Redis · ElasticSearch · Memcached

MESSAGING & INFRA

Kafka · RabbitMQ · Docker · CI/CD · AWS · Nginx

TOOLS & PRACTICES

REST APIs & Webhooks · Microservices · Git / Code Review · Agile / Jira · AI Dev · Claude Code · Automated Testing

LANGUAGES

Romanian	Native
Russian	C2
English	C1
Italian	A1

EDUCATION

Bachelor of Information Technology
UPSC, Chisinau
2014 – 2017

College of Information Technology
CEITI, Chisinau

PHP engineer with **10+ years of experience** building high-throughput, data-intensive backend systems in PHP and Node.js — across regulated and high-stakes environments including telecom billing, financial transaction workflows, and SLA-driven production platforms. Experienced delivering complex integrations with third-party APIs, payment processors, and operational tooling end-to-end. Track record of translating ambiguous operational and compliance requirements into **well-tested, audit-ready implementations**. Comfortable working daily with non-technical stakeholders and communicating clearly across teams. Active user of **AI-assisted development tools including Claude Code** to accelerate delivery and improve code quality.

EXPERIENCE

Backend Laravel Developer — 2025 – 2026

Route4ME — Fully Remote (SaaS route optimisation platform · 150+ employees worldwide)

- Worked within an **8-person backend team** building and maintaining microservices and internal libraries for a high-scale route optimisation SaaS product.
- Designed and shipped a **universal query builder library** — a driver-agnostic abstraction layer supporting MySQL, Elasticsearch, and custom drivers via a unified interface, with strict data integrity guarantees across all drivers.
- Built and maintained **REST APIs and microservices** integrating Elasticsearch, Redis, Google Cloud Datastore, and Google Spanner — with webhook-based event flows and third-party provider integrations.
- Implemented **end-to-end automated test coverage** and containerised deployments in Docker, ensuring release-ready environments aligned with production SLA requirements.

PHP Team Lead & Backend Engineer — 2021 – 2024

WebRocks — Chisinau, Moldova (outsourcing, HQ Netherlands)

- Led a backend team of 5 across full delivery cycles — sprint planning, code reviews, cross-team dependency coordination — while communicating progress and trade-offs clearly to non-technical stakeholders.
- Architected and delivered core features for an **academic SaaS platform** — appointment scheduling, internal messaging, class timetables, and task tracking — serving 10,000+ end users.
- Built **financial workflow automation** for a Dutch salon-chain CRM: cashier-specific transaction processing, shift management, and **audit-trail reporting** — cutting average transaction processing steps by 40%.
- Refactored an e-commerce platform codebase, introducing standardised **code review processes and release controls** enabling safe parallel feature development.

Senior Full-Stack Engineer — 2019 – 2021

WorkIT / Dispatch42 — Chisinau, Moldova (logistics tech)

- Built a **real-time route calculation engine** for freight dispatchers — computing optimal routes and jurisdiction-specific toll costs across multiple markets with geo-mapping integration.
- Developed an **audit-trail document management system** supporting critical shipment record-keeping and regulatory traceability across high-throughput dispatcher workflows.
- Delivered web service infrastructure handling concurrent dispatcher sessions with low-latency data retrieval under sustained production load.

Senior Software Engineer — 2017 – 2019

Ideaction.io — Chisinau, Moldova (outsourcing, US/UK clients)

- Delivered **3+ startup MVPs** from zero to production in under 6 months each, working directly with US and UK product owners in an async-first environment.

2010 – 2014

NOT LOOKING FOR

Please don't reach out for roles primarily involving:

- WordPress / Drupal
- CMS-heavy dev
- Frontend Dev

INTERESTS

- ✈ Travel
- 🎣 Fishing
- 🔥 BBQ
- 🍳 Cooking
- 🖨 3D Printing

- Implemented real-time **1:1 and group chat** and WebRTC-based **video calling** across multiple products.
- Integrated AWS stack (EC2, S3, API Gateway, Lambda) for serverless-ready, cost-efficient backend architecture.
- Built an **AR indoor navigation system** using Bluetooth beacon triangulation — a novel UX feature that became a key product differentiator.
- Managed and mentored 2 mid-level mobile developers (Android/iOS), aligning engineering work with product roadmap milestones.

Middle PHP Developer

Early 2017

Unifun — Chisinau, Moldova (telecom billing platform · 75+ countries)

- Optimised **billing data pipelines** processing up to **1 billion records/day/country** across a high-load telecom operator platform serving 75+ countries — ensuring data integrity and query reliability under strict SLA.
- Parsed and adapted mobile network traffic (tShark) to meet country-specific operator **billing and compliance protocols** across 10+ markets.
- Provided **24/7 on-call incident response** for production billing systems — remotely resolving overloads and briefing monitoring teams under SLA pressure.

EARLY CAREER

Junior+ Software Engineer
Titanium Software, Chisinau
2015 – 2017

Junior Software Engineer
EBS Integrator, Chisinau
2014 – 2015
